September 2009 - June 2012

Bertucci's Restaurant - Server
November 2004 - September 2009

EDUCATION

Bachelors Degree of Science
in Graphic Design
The Art Institute of Philadelphia

EXPERIENCE

POOHBERS

Over the past year, I have learned a lot of front-end development. I wanted to take all of that knowledge and build my own site from scratch. I wrote everything including, HTML, CSS, and JavaScript. You can check out the site (<http://poohbers.com>).

QVC INTERACTIVE EXPERIENCES

For it's most popular shows, QVC wanted to have an interactive experience that fans could use while watching the show. I worked on the design and CSS for *The Lisa Robertson Show* and *You're Home with Jill*, along with another designer and developer.

PROJECT H

This was a research team that was tasked with rethinking the QVC web experience. I worked with a creative director, designers, UX, and social team members to look at where QVC is today and where it could be in the future.

IN THE KITCHEN WITH DAVID CHAT

"In The Kitchen With David" is one of the most popular shows on QVC. David's team wanted a place where fans could go to chat during the live show. I teamed up with a developer and designer to build this, and I worked on the design and CSS. The chat has expanded to other shows on the network and is available through the QVC iPad app.

INFO PORTRAYAL

This was a research team that was tasked with rethinking the QVC televised broadcast graphics. I worked with a creative director, designers, and motion graphics animator to conceptualize and design future QVC broadcast interactions and graphics.

MAGIC IMAGE GRABBER

I, along with a developer created a tool for the design department to look up product images. Before, the designers had to manually type and edit a complicated URL. Now, they type in a product number and get all of the available images. It is a very successful product that about 50+ people in the company continue to use today.

YAGGLO

I went to Philly Startup Weekend (<http://philly.startupweekend.org/>) with an idea, a new web browser for the iPad. I was able to team up with two other guys, and together, we were able to put together a rough prototype and win (<http://technical.ly/philly/2012/04/23/yagglo-bests-17-other-startups-to-win-startup-weekend/>).
